DNA vs RNA Comparison

Deoxyribonucleic acid

Ribonucleic acid

SPEC CPU Benchmark

Table 1: SPECINTC2006 benchmark programs

Name	Details		
	Description	Instruction Count	Reference Time
gcc	GNU C Compiler	794 G	8050 sec
h264avc	Video Compression	3793 G	22130 sec

This table is taken from [2]

Table1 shows some of the SPEC CPU benchmark programs that we can use to assess the execution performance of different computational processors.

Newton's Law of Universal Gravitation

Newton's law of universal gravitation states that any two particles in this universe attract each other with a force that is proportional to the product of their masses and inversely proportional to the square of the distance between their centers. This is one of the foundational laws in classical physics that was first described and formulated in Sir Isaac Newton's famous *Principia* book[1].

The equation takes the form $F_g = G \frac{m_1 m_2}{r^2}$ or $F_{ab} = -G \frac{m_a m_b}{|r_{ab}|^2} \hat{r}_{ab}$ among many other forms.

Display This Section Too!

You need to display this section in your output PDF file. This section contains information that may help you prepare the bibliography section.

1. Citation about SPEC CPU Benchmark

- **Authors:** David A. Patterson, John L. Hennessy
- **Title:** Computer Organization and Design MIPS Edition
- **Publisher:** Morgan Kaufmann
- **Year:** 2013
- **Edition:** 5th

2. Citation about Universal Gravitation

- **Author:** Isaac Newton
- **Title:** Philosophiae Naturalis Principia Mathematica
- **Publisher:** Jussu Societatis Regiae ac Typis Josephi Streater
- **Year:** 1687
